Federal Experience

The U.S. Department of Veterans Affairs

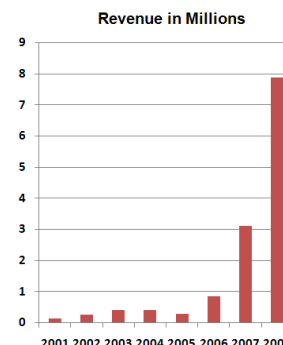

- **PIV System Implementation** - We designed, integrated, implemented, and maintained a solution compliant with VA lifecycle identity and access management requirements. The solution supports a strategy that enables VA to reduce capital investment needs over time, reduce help desk demands, and migrate the infrastructure to web services and solutions. The VA PIV solution is expected to support more than 500,000 users and can scale to manage the identities and access privileges of more than 26 million Veterans.
- **OneVA Portal** - We collected and analyzed business requirements to define the data services required to support multiple categories of portal users. Our team then developed an implementation roadmap which identified the timelines and milestones required for solution design, legacy website integration, pilot deployment and evaluation, and future integration of legacy websites. The delivered portal solution integrates data services across multiple data sources and creates a common entry point for Veterans.
- **RMIT Common Services Support** - We developed a strategy for providing common identity management, web systems, and data management services across VA. We created the strategic planning and documentation required to support Capital Planning and Investment Control (CPIC), Exhibit 300 submission, and technical implementation of the three common services. We also developed bridging and phased implementation strategies designed to minimize disruption to the lines of business, rapidly deploy the common services, and reduce the investment capital needed.

The U.S. Small Business Administration

- **HSPD-12 PMO** - Our familiarity with HSPD-12 technical and process requirements was integral to analyzing the SBA unique requirements and developing a strategy for meeting HSPD-12 and SBA goals. Our support of the HSPD-12 PMO included an "As Is" technology and process analysis, targeted stakeholder communications and briefs, quality assurance plan implementation, and schedule and cost control enhancements. We are currently developing a strategy to integrate identity and security credentials across the enterprise utilizing the PIV Card.

Corporate Performance

LS3 Technologies has been a prime contractor to the Federal Government for several years and has experienced year over year growth since we were first established in 2001. We were recently certified as an Open Ratings Top 20% Performer based on the Past Performance Evaluation surveys completed by our customers. Our almost perfect Open Ratings score is a testament to the level of satisfaction we deliver. We boast a 100% customer retention rate which also validates our ability to successfully deliver solutions and value to our customers.
